

IOWA STATE UNIVERSITY

SDMAY20-53: Smart Backpack Sprayer

David Hayes (Communication Engineer)
Madison Kriege (Communication Engineer)
Kevin Davis (Hardware Research Engineer)
Sean Doran (Logistics Engineer)
Donald Laraquente (API Research Engineer)
Shuangquan Li (iOS Engineer)

Clients: Tim Andersen & Taylor Greiner

Advisor: Dr. Daji Qiao

<http://sdmay20-53.sd.ece.iastate.edu/>

Project Vision

- Create a smart backpack sprayer for different uses
 - Small scale agricultural operations
 - City use for sanitizing sidewalks or parks
- Display data to user
 - Increase efficiency of spraying
 - Record of previous applications
- Impacts to User
 - Minimize excess spraying
 - Minimize spraying costs
 - Ensure full coverage of spray on land

Conceptual Sketch

- Application that interfaces with backpack sprayer
- Clientele are farmers and city employees
- Unique in that nothing available to this scale

Functional Reqs (Hardware)

- The hardware shall
 - Use a flow sensor with accuracy to 10% of the duty cycle
 - Use a GPS sensor with accuracy to 3 meters
 - Use a compass Sensor with accuracy to 30 degrees
 - Have a battery life at least 3 hours.
 - Be mountable inside backpack sprayer
 - Package data in JSON format
 - Be able to send data using Bluetooth
- Data shall be collected in 1 second intervals
- Data collection shall be time-stamped with 24 hour time format

Non-Functional Reqs (Hardware)

- The system shall
 - Be water resistant
 - Be operable in temperatures between 0-40C
 - Be under 30 pounds
 - Be wearable on one's back

Functional Reqs (Software)

- The app shall
 - Display the row data
 - Display data in the map with a pin
 - Support multi-user usability
 - Support editing the type of chemicals
 - Sync data between cloud and local
 - Support offline data access

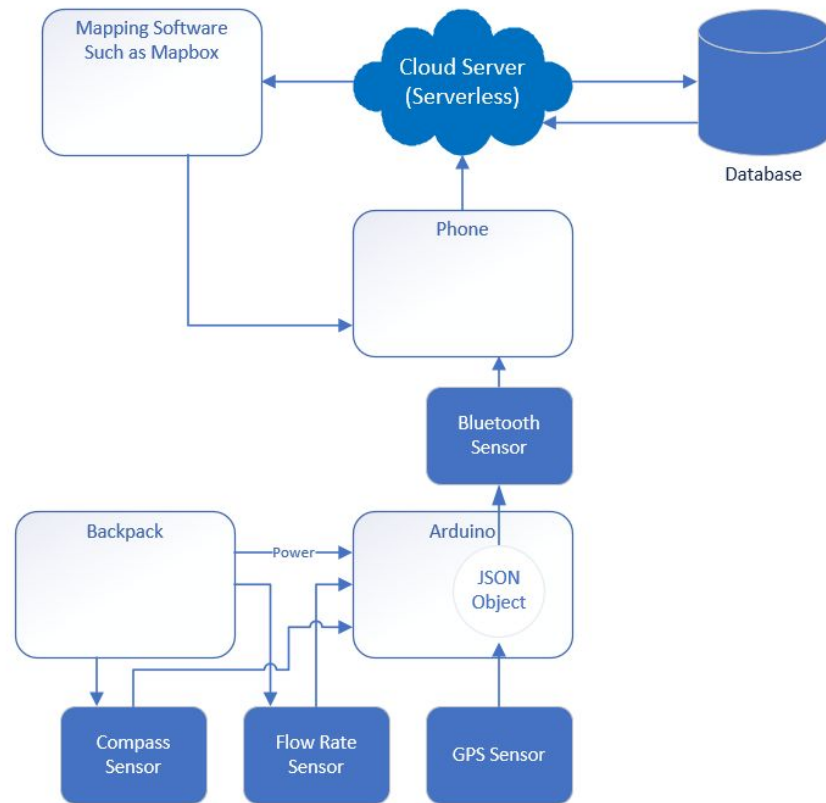

Non-Functional Reqs (Software)

- The code base shall easy to maintain
- Data shall only accessible to authorized user
- The system shall support large amount data transmission

Technical and Other Constraints

- Mobile platform - iOS
- Data format - JSON
- Close range communication - Bluetooth
- Low/off network connectivity

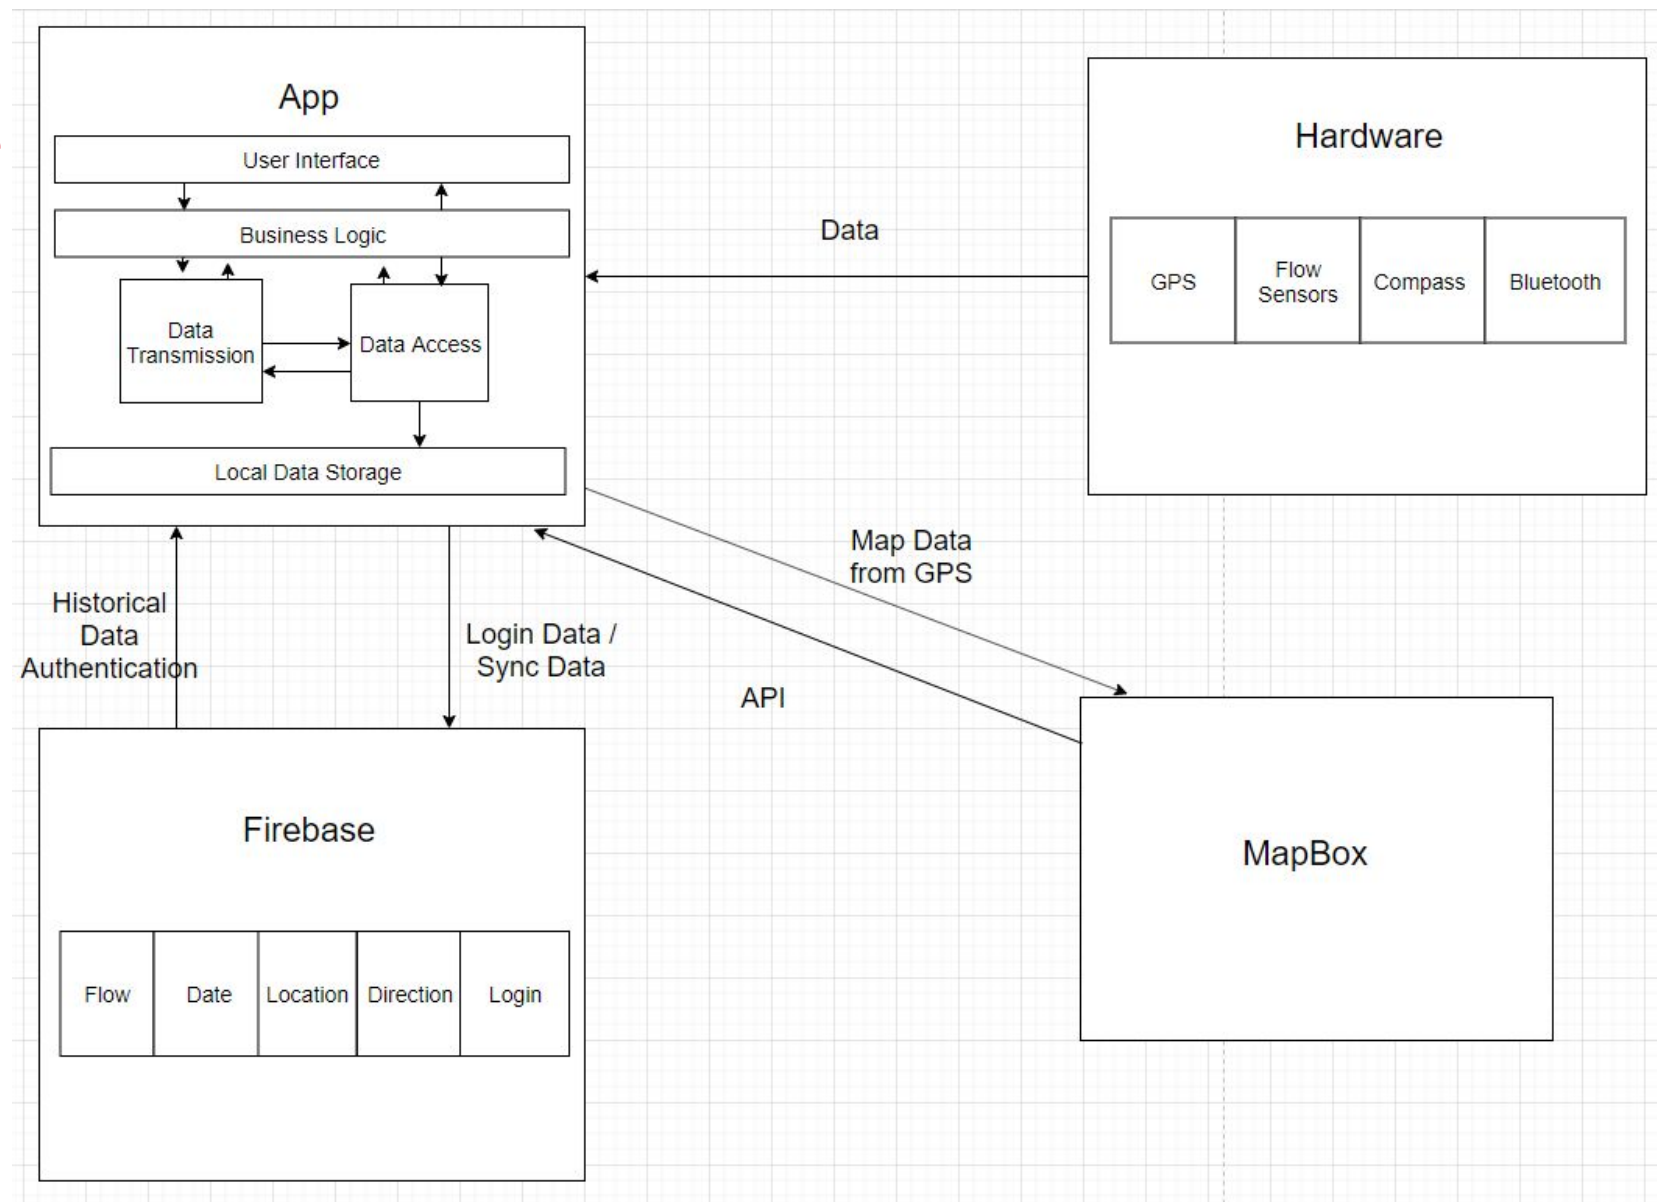

Conceptual Design Diagram

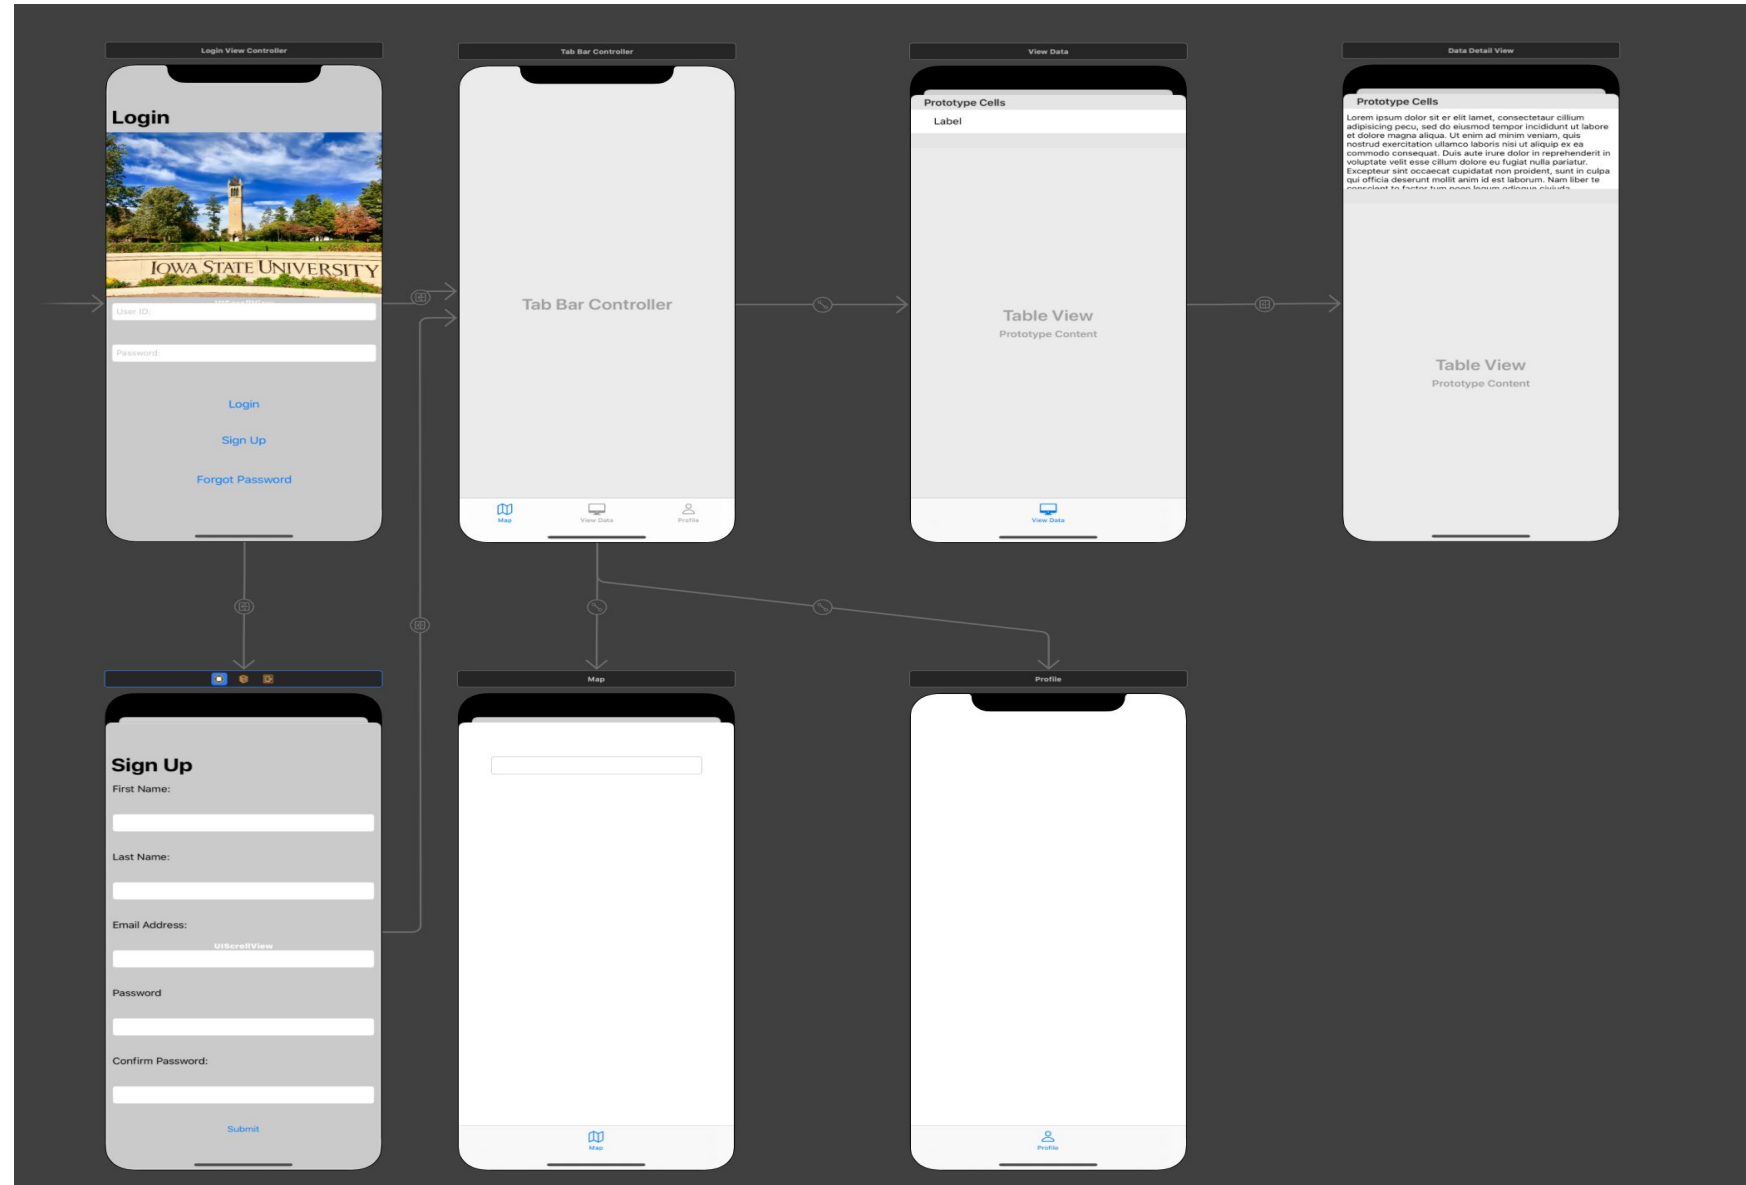

Project Plan

- Project Tasks
 - 3 sub-teams, each focused on one component
 - Hardware: David and Kevin
 - iOS Application: Madison and Shuangquan
 - API Integration: Sean and Donald
- Risk Management
 - Accuracy of sensors
 - Mitigation: Purchasing new hardware
 - Compatibility of sub-components
 - Mitigation: Early and often integration

Detailed Design - System Architecture Diagram

Detailed Design Interface Diagram

HW/SW Platforms

- Hardware Platforms
 - Arduino
 - TinyGPS++
 - ArduinoJSON
- Software Platforms
 - Firebase
 - Xcode
 - iOS
 - Mapbox
 - C++

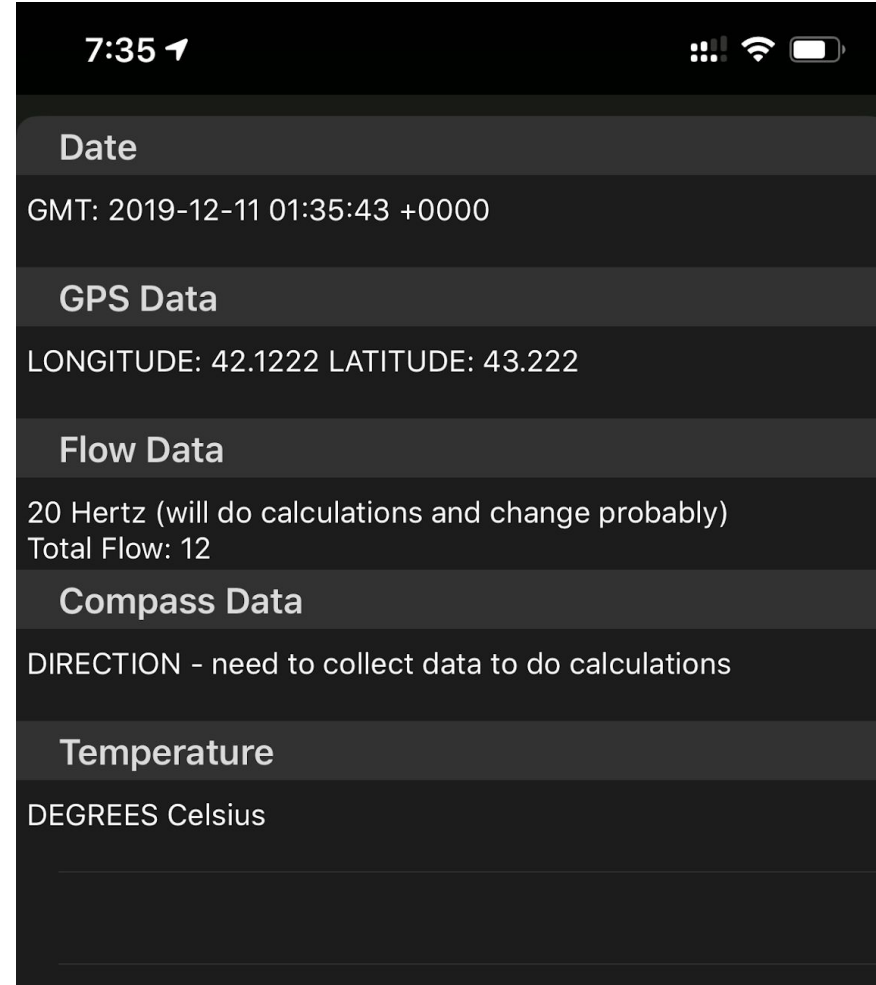

Prototype Implementations - Hardware

- Test hardware sensors individually
- Integrate together in single program
- Results
 - Collecting more data to ensure they are accurate
 - Bluetooth - work in progress
 - Package data to be sent

Prototype Implementations - iOS

- An app has been implemented
- Results
 - Displays raw data
 - Has multi-user login
 - Displays the map with current location
 - Connects to the cloud and transmit data

Prototype Implementations - API

- Created a project in Firebase
 - Users can login/register using their information
 - Users can also use their email to reset their password
- Created a project in Mapbox
 - This allows us to show the points we plot from the data received

Project Plan - Gantt Chart

TASK TITLE	START DATE	DUE DATE	DURATION	PCT OF TASK COMPLETE
Planning				
Design Document V1	10/4/2019	10/7/2019	3	100%
Design Document V2	10/7/2019	10/29/2019	22	100%
Design Document V3	10/30/2019	12/3/2019	33	100%
Weekly Report 1	9/2/2019	9/20/2019	18	100%
Weekly Report 2	9/21/2019	10/4/2019	13	100%
Weekly Report 3	10/7/2019	10/18/2019	11	100%
Weekly Report 4	10/21/2019	11/1/2019	10	100%
Weekly Report 5	11/4/2019	11/15/2019	11	100%
Weekly Report 6	11/18/2019	12/2/2019	14	100%
Fall Semester				
Hardware Delivery	9/9/2019	10/9/2019	30	100%
Hardware Assembly	9/11/2019	10/23/2019	42	100%
Software Development	9/23/2019	11/15/2019	52	90%
Software Prototyping	11/18/2019	12/9/2019	21	50%
Hardware Prototyping	11/18/2019	12/9/2019	21	50%
Spring Semester				
Receive Final Hardware	1/13/2020	1/31/2020	18	0%
Prototype Testing 1	1/13/2020	2/28/2020	45	0%
Prototype Testing 2	3/2/2020	3/31/2020	29	0%
Prototype Testing 3	4/1/2020	5/1/2020	30	0%
Finalization				
Prepare Final Presentation	4/15/2020	5/1/2020	16	0%

Project Plan – Milestones

- Hardware Delivery - Oct 9, 2019 - Completed
- Assembling Hardware - Oct 23, 2019 - Completed
- Software Completion - Nov 16, 2019 - Completed
- Integration - Dec 2, 2019 - In Progress
- Prototype for Software and Hardware - Due Dec 09, 2019 - In Progress
- Prototype v1- Due Feb 28, 2020
- Prototype v2 - Due March 31, 2020
- Final Prototype - Due May 7, 2020

Test Plan

- How is testing performed?
 - Simulator - iOS 13
 - Real device - iPhones
- Component/Unit testing
 - Testing each methods
 - Testing the modules of the hardware - flow sensors, GPS sensors
- Interface/integration testing
 - Testing where top-level units are tested first and lower level units are tested step by step after that
- Acceptance testing
 - Testing all the listed requirement in the design document.

Conclusion

- Where are you in your schedule?
 - On track
 - We have completed enough of the basic design and documentation to allow the team to focus on software and hardware implementation
- Next semester's plans
 - Continue working on software and hardware design.
 - Complete several implementations related to bluetooth and sending information.

```
Terminal
18:04:53.952 Connecting to SH-M08 ...
18:04:55.438 Connected
18:04:55.529 {
18:04:55.529 "gpsData": [
18:04:55.531 42.02432,
18:04:55.531 -93.65654
18:04:55.566 ],
18:04:55.613 "flowData": [
18:04:55.615 0,
18:04:55.657 0
18:04:55.657 ],
18:04:55.703 "compassData": [
18:04:55.704 -16.38083,
18:04:55.704 10.06934,
18:04:55.748 -64.27461
18:04:55.748 ],
18:04:55.750 "temp": 20.20628,
18:04:55.795 "time": "0:4:57",
18:04:55.796 "date": "12/11/2019"
18:04:55.837 }
18:04:56.468 "gpsData": [
18:04:56.511 42.02432,
18:04:56.556 -93.65654
18:04:56.557 ],
18:04:56.606 "flowData": [
18:04:56.645 0,
18:04:56.645 0
18:04:56.646 ],
18:04:56.646 "compassData": [
18:04:56.691 -18.69551,
```

JSON:

```
{
  "gpsData": [
    LONGITUDE,
    LATITUDE
  ],
  "flowData": [
    FLOW (in Hertz) (will do calculations and change probably),
    TOTAL FLOW
  ],
  "compassData": [
    DIRECTION - need to collect data to do calculations
  ],
  "temp": DEGREES Celsius,
  "time": TIME (in GMT) will need to change, was thinking on the
phone,
  "date": DATE (in GMT) will need to adjust, similar to time
}
```
